Preface	v	3.8 Composition of velocities and accelerations	48
Introduction	1	3.9 Relative motion	50
What is physics?	1	4 Curvilinear motion	57
The relation of physics to other sciences	2	4.1 Introduction	57
The experimental method	4	4.2 Curvilinear motion: velocity	58
1 The structure of matter	5	4.3 Curvilinear motion: acceleration	60
1.1 Introduction	5	4.4 Tangential and normal acceleration	62
1.2 Particles	5	4.5 Curvilinear motion with constant acceleration	64
1.3 Atoms	7	4.6 Relative translational motion: the Galilean transformation	69
1.4 Molecules	9	5 Circular motion	77
1.5 Matter in bulk	12	5.1 Introduction	77
1.6 Living systems	15	5.2 Circular motion: angular velocity	77
1.7 Interactions	16	5.3 Circular motion: angular acceleration	81
2 Measurement and units	18	5.4 Vector relations in circular motion	82
2.1 Introduction	18	5.5 Relative rotational motion	85
2.2 Measurement	19	5.6 Motion relative to the Earth	87
2.3 Fundamental quantities	20	6 Force and momentum	93
2.4 Fundamental units	21	6.1 Introduction	93
2.5 Derived units and dimensions	24	6.2 The law of inertia	95
3 Rectilinear motion	29	6.3 Mass	96
3.1 Mechanics	29	6.4 Linear momentum	99
3.2 Frames of reference	30	6.5 Principle of conservation of momentum	100
3.3 Rectilinear motion: velocity	31	6.6 Newton's second and third laws	106
3.4 Rectilinear motion: acceleration	37	6.7 Relationship between force and acceleration	108
3.5 Some special motions	41		
3.6 Free vertical motion under the action of gravity	44		
3.7 Vector representation of velocity and acceleration in rectilinear motion	47		

6.8	Units of force	110	10.5	Basic equation of simple harmonic motion	196
6.9	Classical principle of relativity	112	10.6	The simple pendulum	197
7	Applications of the laws of motion	120	10.7	Superposition of two SHMs in the same direction and frequency	200
7.1	Introduction	120	10.8	Superposition of two SHMs with the same direction but different frequency	203
7.2	Motion under a constant force	120	10.9	Superposition of two SHMs in perpendicular directions	205
7.3	Resultant force	121	10.10	Coupled oscillators	208
7.4	Equilibrium of a particle	125	10.11	Molecular vibrations	210
7.5	Frictional forces	127	10.12	Anharmonic oscillations	212
7.6	Frictional forces in fluids	130	10.13	Damped oscillations	213
7.7	Systems with variable mass	133	10.14	Forced oscillations	216
8	Torque and angular momentum	141	11	Gravitational interaction	239
8.1	Introduction	141	11.1	Introduction	239
8.2	Curvilinear motion	141	11.2	The law of gravitation	241
8.3	Torque	145	11.3	Newton's derivation of the law of force	245
8.4	Angular momentum	146	11.4	Inertial and gravitational mass	247
8.5	Central forces	148	11.5	Gravitational potential energy	249
9	Work and energy	157	11.6	Relation between energy and orbital motion	251
9.1	Introduction	157	11.7	Gravitational field	264
9.2	Work	158	11.8	Gravitational potential	267
9.3	Power	161	11.9	Gravitational field of a spherical body	268
9.4	Units of work and power	161	11.10	The principle of equivalence	274
9.5	Kinetic energy	164	11.11	Gravitation and molecular forces	277
9.6	Units of energy	167	12	Space exploration	286
9.7	Work of a constant force	168	12.1	Introduction	286
9.8	Potential energy	169	12.2	Earth satellites	287
9.9	Relation between force and potential energy	171	12.3	Voyage to the Moon	292
9.10	Conservation of energy of a particle	174	12.4	Exploration of the solar system	294
9.11	Discussion of potential energy curves	177	13	Systems of particles I: Linear and angular momentum	301
9.12	Non-conservative forces and energy dissipation	184	13.1	Introduction	301
10	Oscillatory motion	190	13.2	Motion of the center of mass of an isolated system of particles	302
10.1	Introduction	190	13.3	Motion of the center of mass of a system of particles subject to external forces	307
10.2	Kinematics of simple harmonic motion	191			
10.3	Rotating vectors or phasors	192			
10.4	Force and energy in simple harmonic motion	194			

13.4	Reduced mass	314	16.5	Many particle systems: energy balance	406
13.5	Angular momentum of a system of particles	317	16.6	Special processes	410
13.6	Internal and orbital angular momentum	320	16.7	Heat capacity	412
13.7	Angular momentum of a rigid body	321	16.8	Reversible and irreversible processes	416
13.8	Equation of motion for rotation of a rigid body	328	16.9	Entropy and heat	418
13.9	Oscillatory motion of a rigid body	331	16.10	Efficiency of a thermal engine operating in a Carnot cycle	422
13.10	Gyroscopic motion	334	16.11	The law of entropy	426
13.11	Equilibrium of a body	339	17 Statistical mechanics		433
14 Systems of particles II: Energy		348	17.1	Introduction	433
14.1	Introduction	348	17.2	Statistical equilibrium	434
14.2	Kinetic energy of a system of particles	348	17.3	Maxwell–Boltzmann distribution law	436
14.3	Conservation of energy of a system of particles	349	17.4	Statistical definition of temperature	441
14.4	Total energy of a system of particles subject to external forces	352	17.5	Energy and velocity distribution of the molecules in an ideal gas	446
14.5	Internal energy of a system of particles	353	17.6	Experimental verification of the Maxwell–Boltzmann distribution law	449
14.6	Kinetic energy of rotation of a rigid body	354	17.7	Thermal equilibrium	450
14.7	Rotational energy of molecules	357	17.8	Entropy	453
14.8	Binding energy of a system of particles	358	17.9	Law of increase of entropy	454
14.9	Collisions	360	18 Transport phenomena		462
14.10	Fluid motion	367	18.1	Introduction	462
15 Gases		378	18.2	Molecular diffusion: Fick's law	462
15.1	Introduction	378	18.3	Steady diffusion	465
15.2	Temperature	379	18.4	Thermal conduction: Fourier's law	469
15.3	The ideal gas temperature	381	18.5	Steady thermal conduction	470
15.4	Temperature and molecular energy	384	18.6	Viscosity	472
15.5	Internal energy of an ideal gas	386	18.7	Mean free path and collision frequency	475
15.6	Real gases	390	18.8	Molecular theory of transport phenomena	477
15.7	Polyatomic gases	394	19 The principle of relativity		483
16 Thermodynamics		400	19.1	Introduction	483
16.1	Introduction	400	19.2	The velocity of light	484
16.2	Internal energy and work	401	19.3	The Lorentz transformation	487
16.3	Many particle systems: work	401	19.4	Lorentz transformation of velocities and accelerations	490
16.4	Many particle systems: heat	405			

19.5	Consequences of the Lorentz transformation	492	23	Electric structure of matter	592
19.6	Special principle of relativity	495	23.1	Introduction	592
19.7	Momentum	496	23.2	Electrolysis	592
19.8	Force	498	23.3	The nuclear model of the atom	594
19.9	Energy	500	23.4	Bohr's theory of the atom	596
19.10	The general theory of relativity	505	23.5	Quantization of angular momentum	601
20	High energy processes	518	23.6	Effect of a magnetic field on electronic motion	603
20.1	Introduction	518	23.7	Electron spin	605
20.2	Energy and momentum	519	23.8	Spin-orbit interaction	606
20.3	Systems of particles	522	23.9	Electron shells in atoms	608
20.4	High energy collisions	525	23.10	Electrons in solids	614
20.5	Particle decay	529	23.11	Conductors, semiconductors and insulators	615
21	Electric interaction	539	24	Electric currents	624
21.1	Introduction	539	24.1	Introduction	624
21.2	Electric charge	541	Part A: Electric currents and electric fields	625	
21.3	Coulomb's law	542	24.2	Electric current	625
21.4	Units of charge	543	24.3	Ohm's law	627
21.5	Electric field	545	24.4	Conductivity	628
21.6	Electric field of a point charge	548	24.5	Electric power	632
21.7	The quantization of electric charge	552	24.6	Combination of resistors	634
21.8	Principle of conservation of charge	555	24.7	Direct current circuits	636
21.9	Electric potential	555	24.8	Methods for calculating currents in an electric network	638
21.10	Relation between electric potential and electric field	556	Part B: Electric currents and magnetic fields	641	
21.11	Electric potential of a point charge	558	24.9	Magnetic force on an electric current	641
21.12	Energy relations in an electric field	563	24.10	Magnetic torque on an electric current	645
22	Magnetic interaction	569	24.11	Magnetic field produced by a current	647
22.1	Introduction	569	24.12	Magnetic field of a rectilinear current	648
22.2	Magnetic force on a moving charge	570	24.13	Magnetic field of a circular current	650
22.3	Motion of a charged particle in a uniform magnetic field	572	24.14	Forces between electric currents	653
22.4	Motion of a charged particle in a non-uniform magnetic field	576	25	The electric field	661
22.5	Examples of motion of charged particles in a magnetic field	578	25.1	Introduction	661
22.6	Magnetic field of a moving charge	583	25.2	Electromotive force	661
22.7	Magnetic dipoles	585	25.3	Flux of the electric field	662

25.4	Gauss' law for the electric field	664	27.11	Energy of the electromagnetic field	739
25.5	Properties of a conductor placed in an electric field	670	27.12	Coupled circuits	741
25.6	Electric polarization of matter	673	28 Wave motion		747
25.7	The polarization vector	675	28.1	Introduction	747
25.8	Electric displacement	676	28.2	Waves	748
25.9	Electric susceptibility and permittivity	678	28.3	Description of wave motion	749
25.10	Electric capacitance: capacitors	680	28.4	The general equation of wave motion	753
25.11	Energy of the electric field	685	28.5	Elastic waves	754
26 The magnetic field		690	28.6	Pressure waves in a gas	758
26.1	Introduction	690	28.7	Transverse waves on a string	761
26.2	Ampère's law for the magnetic field	690	28.8	Transverse elastic waves in a rod	763
26.3	Magnetic flux	696	28.9	Surface waves in a liquid	764
26.4	Magnetization of matter	697	28.10	What propagates in wave motion?	766
26.5	The magnetization vector	699	28.11	Waves in two and three dimensions	769
26.6	The magnetizing field	704	28.12	Spherical waves in a fluid	771
26.7	Magnetic susceptibility and permeability	706	28.13	Group velocity	772
26.8	Energy of the magnetic field	708	28.14	The Doppler effect	775
26.9	Summary of the laws for static fields	711	29 Electromagnetic waves		782
27 The electromagnetic field		714	29.1	Introduction	782
27.1	Introduction	714	29.2	Plane electromagnetic waves	783
Part A: The laws of the electromagnetic field		715	29.3	Energy and momentum of an electromagnetic wave	787
27.2	The Faraday–Henry law	715	29.4	Radiation from oscillating dipoles	790
27.3	Electromagnetic induction due to the relative motion of a conductor and a magnetic field	720	29.5	Radiation from an accelerated charge	793
27.4	Electromagnetic induction and the principle of relativity	722	29.6	Propagation of electromagnetic waves in matter; dispersion	797
27.5	The principle of conservation of electric charge	723	29.7	The Doppler effect in electromagnetic waves	798
27.6	The Ampère–Maxwell law	724	29.8	The spectrum of electromagnetic radiation	802
27.7	Maxwell's equations	727	30 Interaction of electromagnetic radiation with matter: photons		808
Part B: Application to electric circuits		728	30.1	Introduction	808
27.8	Self-induction	728	30.2	Emission of radiation by atoms, molecules and nuclei	808
27.9	Free electrical oscillations	732	30.3	Absorption of electromagnetic radiation by atoms, molecules and nuclei	810
27.10	Forced electrical oscillations: alternating current circuits	734			

30.4	Scattering of electromagnetic waves by bound electrons	811	33.7	Dispersion	898
30.5	Scattering of electromagnetic radiation by a free electron: the Compton effect	813	33.8	Chromatic aberration	900
30.6	Photons	816		34 Interference	908
30.7	More about photons: the photoelectric effect in metals	820	34.1	Introduction	908
31 Radiative transitions		824	34.2	Interference of waves produced by two synchronous sources	909
31.1	Introduction	824	34.3	Interference from several synchronous sources	914
31.2	Stationary states	825	34.4	Standing waves in one dimension	919
31.3	Interaction of radiation with matter	829	34.5	Standing electromagnetic waves	924
31.4	Atomic spectra	831	34.6	Standing waves in two dimensions	926
31.5	Molecular spectra	835	34.7	Standing waves in three dimensions; resonant cavities	929
31.6	Radiative transitions in solids	838	34.8	Waveguides	930
31.7	Spontaneous and stimulated radiative transitions	841	35 Diffraction		936
31.8	Masers and lasers	843	35.1	Introduction	936
31.9	Blackbody radiation	848	35.2	Huygens' principle	937
32 Reflection, refraction and polarization		856	35.3	Fraunhofer diffraction by a rectangular slit	939
32.1	Introduction	856	35.4	Fraunhofer diffraction by a circular aperture	942
32.2	Rays and wave surfaces	857	35.5	Fraunhofer diffraction by two equal parallel slits	944
32.3	Reflection and refraction of plane waves	858	35.6	Diffraction gratings	945
32.4	Reflection and refraction of spherical waves	861	35.7	X-ray scattering by crystals	948
32.5	Reflection and transmission of transverse waves on a string	863	36 Quantum mechanics: fundamentals		955
32.6	Reflection and refraction of electromagnetic waves	865	36.1	Introduction	955
32.7	Propagation of electromagnetic waves in an anisotropic medium	867	36.2	Particles and fields	956
32.8	Reflection and refraction at metallic surfaces	872	36.3	Scattering of particles by crystals	957
33 Wave geometry		875	36.4	Particles and wave packets	960
33.1	Introduction	875	36.5	Heisenberg's uncertainty principle for position and momentum	961
33.2	Reflection at a spherical surface	876	36.6	Illustrations of Heisenberg's principle	963
33.3	Refraction at a spherical surface	882	36.7	The uncertainty relation for time and energy	967
33.4	Lenses	885	36.8	Stationary states and the matter field	968
33.5	Optical instruments	891	36.9	Wave function and probability density	971
33.6	The prism	897			

37 Quantum mechanics: applications	977	41 The ultimate structure of matter	1070
37.1 Introduction	977	41.1 Introduction	1070
37.2 Schrödinger's equation	978	41.2 The 'fundamental' particles	1071
37.3 Free particle	979	41.3 Particles and antiparticles	1073
37.4 Potential wall	980	41.4 Particle instability	1077
37.5 Potential box	981	41.5 The conservation laws	1080
37.6 Potential well	985	41.6 Symmetry and interactions	1081
37.7 Particles in a general potential	988	41.7 Resonances	1085
37.8 The simple harmonic oscillator	991	41.8 The standard model	1087
37.9 Potential barrier penetration	993	41.9 The evolution of the universe	1091
38 Atoms, molecules and solids	999	Notes	
38.1 Introduction	999	2.1 Historical basis for the fundamental units	23
38.2 Angular wavefunction under a central force	999	2.2 Space, time and matter	26
38.3 Atoms with one electron	1002	3.1 The age of the universe	52
38.4 Atoms with two electrons	1006	5.1 Radial and transverse velocity in plane curvilinear motion	80
38.5 Atoms with many electrons	1009	6.1 The forces we know	114
38.6 Diatomic molecules	1012	8.1 Scattering of a particle by a central repulsive inverse square force	153
38.7 Linear molecules	1015	9.1 Relation between force, torque and potential energy in plane curvilinear motion	173
38.8 The geometry of molecules	1017	9.2 Energy in plane curvilinear motion	182
38.9 Structure of solids	1020	10.1 Impedance of an oscillator	221
38.10 Electrons in metals	1023	10.2 Fourier analysis of periodic motion	224
39 Nuclear structure	1027	10.3 Representation of oscillatory motion in phase space	226
39.1 Introduction	1027	10.4 Non-linear oscillations and dynamical chaos	230
39.2 The nucleus	1027	11.1 General motion under gravitational attraction	259
39.3 Properties of the nucleus	1028	11.2 Gravitational energy of a spherical body	261
39.4 Nuclear binding energy	1030	11.3 Critical density of the universe	262
39.5 Nuclear forces	1031	11.4 Gravitation and the large-scale structure of the universe	278
39.6 The deuteron	1034	11.5 Gravitation and dynamical chaos	280
39.7 Neutron-proton scattering	1035	13.1 Discussion of the interaction between two systems of particles	313
39.8 The shell model	1036	13.2 Precession of a gyroscope	336
39.9 Nuclear radiative transitions	1038		
40 Nuclear processes	1042		
40.1 Introduction	1042		
40.2 Radioactive decay	1042		
40.3 α -decay	1045		
40.4 β -decay	1048		
40.5 Nuclear reactions	1052		
40.6 Nuclear fission	1054		
40.7 Fission chain reactions	1056		
40.8 Nuclear fusion	1059		

B: Mathematical relations	1106	B.7 Average value of a function	1110
B.1 Trigonometric functions	1106	B.8 Conic sections	1111
B.2 Logarithms	1107	C: Calculation of the moment of inertia	1112
B.3 Power expansions	1108	Answers to selected problems	1114
B.4 Plane and solid angles	1109	Index	1124
B.5 Basic derivatives and integrals	1110		
B.6 Special integrals	1110
