**CHAPTER 1**

**ELECTROSTATICS: CHARGES AND FIELDS**

1

|             |   |    |
|-------------|---|----|
| <b>1.1</b>  | Electric charge                           | 1  |
| <b>1.2</b>  | Conservation of charge                    | 4  |
| <b>1.3</b>  | Quantization of charge                    | 5  |
| <b>1.4</b>  | Coulomb's law                             | 7  |
| <b>1.5</b>  | Energy of a system of charges             | 11 |
| <b>1.6</b>  | Electrical energy in a crystal lattice    | 14 |
| <b>1.7</b>  | The electric field                        | 16 |
| <b>1.8</b>  | Charge distributions                      | 20 |
| <b>1.9</b>  | Flux                                      | 22 |
| <b>1.10</b> | Gauss's law                               | 23 |
| <b>1.11</b> | Field of a spherical charge distribution  | 26 |
| <b>1.12</b> | Field of a line charge                    | 28 |
| <b>1.13</b> | Field of an infinite flat sheet of charge | 29 |
| <b>1.14</b> | The force on a layer of charge            | 30 |
| <b>1.15</b> | Energy associated with the electric field | 33 |
| <b>1.16</b> | Applications                              | 35 |

---

|   |            |
|---|------------|
| Chapter summary   | 38         |
| Problems  | 39         |
| Exercises   | 47         |
| <b>CHAPTER 2</b>  |            |
| <b>THE ELECTRIC POTENTIAL</b>   | <b>58</b>  |
| <b>2.1</b> Line integral of the electric field                          | 59         |
| <b>2.2</b> Potential difference and the potential function              | 61         |
| <b>2.3</b> Gradient of a scalar function                                | 63         |
| <b>2.4</b> Derivation of the field from the potential                   | 65         |
| <b>2.5</b> Potential of a charge distribution                           | 65         |
| <b>2.6</b> Uniformly charged disk                                       | 68         |
| <b>2.7</b> Dipoles  | 73         |
| <b>2.8</b> Divergence of a vector function                              | 78         |
| <b>2.9</b> Gauss's theorem and the differential form of Gauss's law     | 79         |
| <b>2.10</b> The divergence in Cartesian coordinates                     | 81         |
| <b>2.11</b> The Laplacian   | 85         |
| <b>2.12</b> Laplace's equation  | 86         |
| <b>2.13</b> Distinguishing the physics from the mathematics             | 88         |
| <b>2.14</b> The curl of a vector function                               | 90         |
| <b>2.15</b> Stokes' theorem   | 92         |
| <b>2.16</b> The curl in Cartesian coordinates                           | 93         |
| <b>2.17</b> The physical meaning of the curl                            | 95         |
| <b>2.18</b> Applications  | 100        |
| Chapter summary   | 103        |
| Problems  | 105        |
| Exercises   | 112        |
| <b>CHAPTER 3</b>  |            |
| <b>ELECTRIC FIELDS AROUND CONDUCTORS</b>                                | <b>124</b> |
| <b>3.1</b> Conductors and insulators                                    | 125        |
| <b>3.2</b> Conductors in the electrostatic field                        | 126        |
| <b>3.3</b> The general electrostatic problem and the uniqueness theorem | 132        |
| <b>3.4</b> Image charges  | 136        |
| <b>3.5</b> Capacitance and capacitors                                   | 141        |
| <b>3.6</b> Potentials and charges on several conductors                 | 147        |
| <b>3.7</b> Energy stored in a capacitor                                 | 149        |
| <b>3.8</b> Other views of the boundary-value problem                    | 151        |
| <b>3.9</b> Applications   | 153        |
| Chapter summary   | 155        |

|           |     |
|-----------|-----|
| Problems  | 155 |
| Exercises | 163 |

## CHAPTER 4

### ELECTRIC CURRENTS

177

|      |   |     |
|------|---|-----|
| 4.1  | Electric current and current density          | 177 |
| 4.2  | Steady currents and charge conservation       | 180 |
| 4.3  | Electrical conductivity and Ohm's law         | 181 |
| 4.4  | The physics of electrical conduction          | 189 |
| 4.5  | Conduction in metals                          | 198 |
| 4.6  | Semiconductors                                | 200 |
| 4.7  | Circuits and circuit elements                 | 204 |
| 4.8  | Energy dissipation in current flow            | 207 |
| 4.9  | Electromotive force and the voltaic cell      | 209 |
| 4.10 | Networks with voltage sources                 | 212 |
| 4.11 | Variable currents in capacitors and resistors | 215 |
| 4.12 | Applications                                  | 217 |
|      | Chapter summary                               | 221 |
|      | Problems                                      | 222 |
|      | Exercises                                     | 226 |

## CHAPTER 5

### THE FIELDS OF MOVING CHARGES

235

|     |   |     |
|-----|---|-----|
| 5.1 | From Oersted to Einstein  | 236 |
| 5.2 | Magnetic forces   | 237 |
| 5.3 | Measurement of charge in motion                                 | 239 |
| 5.4 | Invariance of charge  | 241 |
| 5.5 | Electric field measured in different frames<br>of reference     | 243 |
| 5.6 | Field of a point charge moving with constant velocity           | 247 |
| 5.7 | Field of a charge that starts or stops                          | 251 |
| 5.8 | Force on a moving charge  | 255 |
| 5.9 | Interaction between a moving charge and other<br>moving charges | 259 |
|     | Chapter summary   | 267 |
|     | Problems  | 268 |
|     | Exercises   | 270 |

## CHAPTER 6

### THE MAGNETIC FIELD

277

|     |                                       |     |
|-----|---------------------------------------|-----|
| 6.1 | Definition of the magnetic field      | 278 |
| 6.2 | Some properties of the magnetic field | 286 |

|             |   |     |
|-------------|---|-----|
| <b>6.3</b>  | Vector potential  | 293 |
| <b>6.4</b>  | Field of any current-carrying wire                            | 296 |
| <b>6.5</b>  | Fields of rings and coils                                     | 299 |
| <b>6.6</b>  | Change in $\mathbf{B}$ at a current sheet                     | 303 |
| <b>6.7</b>  | How the fields transform                                      | 306 |
| <b>6.8</b>  | Rowland's experiment  | 314 |
| <b>6.9</b>  | Electrical conduction in a magnetic field:<br>the Hall effect | 314 |
| <b>6.10</b> | Applications  | 317 |
|             | Chapter summary   | 322 |
|             | Problems  | 323 |
|             | Exercises   | 331 |

## CHAPTER 7

### ELECTROMAGNETIC INDUCTION 342

|             |   |     |
|-------------|---|-----|
| <b>7.1</b>  | Faraday's discovery                                       | 343 |
| <b>7.2</b>  | Conducting rod moving through a uniform<br>magnetic field | 345 |
| <b>7.3</b>  | Loop moving through a nonuniform magnetic field           | 346 |
| <b>7.4</b>  | Stationary loop with the field source moving              | 352 |
| <b>7.5</b>  | Universal law of induction                                | 355 |
| <b>7.6</b>  | Mutual inductance   | 359 |
| <b>7.7</b>  | A reciprocity theorem                                     | 362 |
| <b>7.8</b>  | Self-inductance   | 364 |
| <b>7.9</b>  | Circuit containing self-inductance                        | 366 |
| <b>7.10</b> | Energy stored in the magnetic field                       | 368 |
| <b>7.11</b> | Applications  | 369 |
|             | Chapter summary   | 373 |
|             | Problems  | 374 |
|             | Exercises   | 380 |

## CHAPTER 8

### ALTERNATING-CURRENT CIRCUITS 388

|            |  |     |
|------------|--|-----|
| <b>8.1</b> | A resonant circuit                               | 388 |
| <b>8.2</b> | Alternating current                              | 394 |
| <b>8.3</b> | Complex exponential solutions                    | 402 |
| <b>8.4</b> | Alternating-current networks                     | 405 |
| <b>8.5</b> | Admittance and impedance                         | 408 |
| <b>8.6</b> | Power and energy in alternating-current circuits | 415 |
| <b>8.7</b> | Applications                                     | 418 |
|            | Chapter summary                                  | 420 |
|            | Problems   | 421 |
|            | Exercises  | 424 |

## CHAPTER 9

### MAXWELL'S EQUATIONS AND ELECTROMAGNETIC WAVES

430

|            |   |     |
|------------|---|-----|
| <b>9.1</b> | "Something is missing"                    | 430 |
| <b>9.2</b> | The displacement current                  | 433 |
| <b>9.3</b> | Maxwell's equations                       | 436 |
| <b>9.4</b> | An electromagnetic wave                   | 438 |
| <b>9.5</b> | Other waveforms; superposition of waves   | 441 |
| <b>9.6</b> | Energy transport by electromagnetic waves | 446 |
| <b>9.7</b> | How a wave looks in a different frame     | 452 |
| <b>9.8</b> | Applications                              | 454 |
|            | Chapter summary                           | 455 |
|            | Problems                                  | 457 |
|            | Exercises                                 | 461 |

## CHAPTER 10

### ELECTRIC FIELDS IN MATTER

466

|              |   |     |
|--------------|---|-----|
| <b>10.1</b>  | Dielectrics   | 467 |
| <b>10.2</b>  | The moments of a charge distribution                          | 471 |
| <b>10.3</b>  | The potential and field of a dipole                           | 474 |
| <b>10.4</b>  | The torque and the force on a dipole in an external field     | 477 |
| <b>10.5</b>  | Atomic and molecular dipoles; induced dipole moments          | 479 |
| <b>10.6</b>  | Permanent dipole moments                                      | 482 |
| <b>10.7</b>  | The electric field caused by polarized matter                 | 483 |
| <b>10.8</b>  | Another look at the capacitor                                 | 489 |
| <b>10.9</b>  | The field of a polarized sphere                               | 492 |
| <b>10.10</b> | A dielectric sphere in a uniform field                        | 495 |
| <b>10.11</b> | The field of a charge in a dielectric medium, and Gauss's law | 497 |
| <b>10.12</b> | A microscopic view of the dielectric                          | 500 |
| <b>10.13</b> | Polarization in changing fields                               | 504 |
| <b>10.14</b> | The bound-charge current                                      | 505 |
| <b>10.15</b> | An electromagnetic wave in a dielectric                       | 507 |
| <b>10.16</b> | Applications  | 509 |
|              | Chapter summary   | 511 |
|              | Problems  | 513 |
|              | Exercises   | 516 |

## CHAPTER 11

### MAGNETIC FIELDS IN MATTER

523

|             |  |     |
|-------------|--|-----|
| <b>11.1</b> | How various substances respond to a magnetic field | 524 |
|-------------|--|-----|

# CONTENTS

|  |  |     |
|--|--|-----|
| <b>11.2</b>  | The absence of magnetic “charge”               | 529 |
| <b>11.3</b>  | The field of a current loop                    | 531 |
| <b>11.4</b>  | The force on a dipole in an external field     | 535 |
| <b>11.5</b>  | Electric currents in atoms                     | 540 |
| <b>11.6</b>  | Electron spin and magnetic moment              | 546 |
| <b>11.7</b>  | Magnetic susceptibility                        | 549 |
| <b>11.8</b>  | The magnetic field caused by magnetized matter | 551 |
| <b>11.9</b>  | The field of a permanent magnet                | 557 |
| <b>11.10</b>                                       | Free currents, and the field <b>H</b>          | 559 |
| <b>11.11</b>                                       | Ferromagnetism                                 | 565 |
| <b>11.12</b>                                       | Applications                                   | 570 |
|  | Chapter summary                                | 573 |
|  | Problems                                       | 575 |
|  | Exercises                                      | 577 |
| <br><b>CHAPTER 12</b>                              |  |     |
| <b>SOLUTIONS TO THE PROBLEMS</b>                   |  | 586 |
| <b>12.1</b>  | Chapter 1                                      | 586 |
| <b>12.2</b>  | Chapter 2                                      | 611 |
| <b>12.3</b>  | Chapter 3                                      | 636 |
| <b>12.4</b>  | Chapter 4                                      | 660 |
| <b>12.5</b>  | Chapter 5                                      | 678 |
| <b>12.6</b>  | Chapter 6                                      | 684 |
| <b>12.7</b>  | Chapter 7                                      | 707 |
| <b>12.8</b>  | Chapter 8                                      | 722 |
| <b>12.9</b>  | Chapter 9                                      | 734 |
| <b>12.10</b>                                       | Chapter 10                                     | 744 |
| <b>12.11</b>                                       | Chapter 11                                     | 755 |
| <br><b>Appendix A:</b>                             |  |     |
| <b>Differences between SI and Gaussian units</b>   |  | 762 |
| <br><b>Appendix B:</b>                             |  |     |
| <b>SI units of common quantities</b>               |  | 769 |
| <br><b>Appendix C:</b>                             |  |     |
| <b>Unit conversions</b>                            |  | 774 |
| <br><b>Appendix D:</b>                             |  |     |
| <b>SI and Gaussian formulas</b>                    |  | 778 |
| <br><b>Appendix E:</b>                             |  |     |
| <b>Exact relations among SI and Gaussian units</b> |  | 789 |
